EPOCHFIELD DAMAGE ASSESSMENT

When a storm hits, inevitably there is damage to a utility's infrastructure. The first step to fixing that damage and restoring power to customers is accurate and efficient damage assessment.

EpochField's Damage Assessment workflow provides that and more. It seamlessly integrates with Outage Management systems to disseminate outage locations and associated work assignments to field scouts. Its ability to function offline allows those scouts to collect damage in remote locations without an internet connection. And a state of the art, bi-directional synchronization framework pushes all assessment data back to the server and gets new work assignments out to the scouts resulting in vastly improved assessment times over traditional paper workflows.

Field data synchronization will occur continuously throughout a storm event allowing decision makers to utilize our Executive Dashboards to monitor assessment progress and overall damage throughout the service territory in near real time. This results in more timely and informed decisions about where to focus restoration efforts. EpochField runs on Windows, Android, and iOS devices, so foreign aid crews can download the application and their work assignment data and be assessing damage within minutes.

KEY FEATURES AND BENEFITS

- Bring Your Own Device friendly - compatible with Windows, Android, and iOS devices.
- Seamlessly integrates with Outage Management systems.
- Built on cutting edge ArcGIS Runtime technology and the ArcGIS Platform.
- Integrates directly with ArcGIS Online or on premise ArcGIS Server implementations.
- Damage Assessment workflow can be utilized while online or offline, on a clear blue day, or after a severe storm.
- Bi-directional data synchronization framework gets field data back to the office and new assignments out to the scouts.
- Executive Dashboards provide decision makers with a near real time synopsis of the state of their service territory during an event.
- Construction map books are created on the fly as assessments are completed on a circuit, so construction crews can be dispatched as soon as they are needed with the information they need to complete their work.
- Configurable data collection screens.
- Fully scalable architecture which supports.
